Of the fire department, was the first witness called. The chief had nothing of a startling nature to tell, but in reply to a question stated that the combined capacity of the two engines which were employed in pumping out the water from the cellars is 12,000 gallons. He also fixed the time of the receipt of the alarm which was sent into the fire department, at 2:18 a. m. F. L. HINES.

F. L. HINES,
the first employee of the waterworks
who reached the scene of the break,
toid of having received a telephone
alarm from 121 South Main street. He
had been informed that there was a
break in the service pipe and when he
responded shut off the service pipe at
Hogle's and the Union National bank.
This had no effect whatever. The water still continued to flow and the witness returned to the office of the department and sent for the nightwatchman at the warehouse, corner of State COTTONWOOD POWER COMPANY.

an emergency man of the waterworks department, testified to having had a call from the intersection of Twelfth East and Flfth South, and after repairing the break at that point be returned to the business portion of the city. Near the theatre corner he met Clark, the night watchman at the warehouse, and was informed that there was a bursted water main at the intersection of Second South and Main. Upon arriving at the scene of the flood the witness turned off the valve at the corner of First South and Main, assisted by J. R. Walker, ir., and then returned to the Union National bank corner for the purpose of shutting off the other valve there. It required half an hour's hard labor to locate and uncover the valve box and shut down the valve. The water still continued to ruch out of the break in the main and with all the haste possible Pitts, with the assistance of Mr. Walker, Superintendent Griffin, Hines and Forman Ripley shut off all valves of mains leading to the corner, the last being closed just before 5 o'clock.

W. J. McINTYRE, clerk in the waterworks department, told of the receipt of the first clarm and the subsequent work of the department in shutting off the water. He was not on the scene of the break and knew little of the trouble.

J. W. SULLIVAN was put on the stand for the purpose of giving expert testimony regarding water pipe. In his opinion a pressure of 130 pounds would not break a perfect pipe. The presence of air holes in the bursted section of pipe would not ald much in its going to pieces.
